

**A FIELD PROJECT REPORT ON
TRAVEL BOOKING AGENCIES**

Submitted

in partial fulfilment of the requirements for the award of the degree

**BACHELOR OF TECHNOLOGY
In
COMPUTER SCIENCE AND ENGINEERING**

By

REGALLA DURGA (241FA04194)

UDAY BAVIREDDY (241FA04283)

PORUMALLAMADHAVI (241FA04319)

NALLANI TRINADH (241FA04558)

Under the Guidance of

Mr. Kumar Devapogu

Assistant Professor, CSE

Department of Computer Science and Engineering

School of Computing and Informatics

**Vignan's Foundation for Science, Technology and Research (Deemed to be University)
Vadlamudi, Guntur, Andhra Pradesh-522213, India.**

April – 2026

CERTIFICATE

This is to certify that the field project entitled “**TRAVEL BOOKING AGENCIES**” is being submitted by (REGALLA DURGA & 241FA04194), (UDAY BAVIREDDY & 241FA04283), (PORUMALLA MADHAVI & 241FA04319), and (NALLANI TRINADH & 241FA04558) in partial fulfilment of the requirements for the degree of Bachelor of Technology (B.Tech) in **Computer Science and Engineering** at Vignan's Foundation For Science Technology & Research (Deemed to be University), Vadlamudi, Guntur District, Andhra Pradesh, India.

This is a bona fide work carried out by the aforementioned students under my guidance and supervision.

Project Review Committee

Head of the Department

DECLARATION

Date:

We hereby declare that the work presented in the field project titled ” **TRAVEL BOOKING AGENCIES**”, is the result of our own efforts and investigation. This project is being submitted under the supervision of **Mr. Kumar Devapogu**, in partial fulfilment of the requirements for the Bachelor of Technology (B.Tech) degree in the Department of Computer Science and Engineering at Vignan’s Foundation for Science, Technology and Research (Deemed to be University), Vadlamudi, Guntur, Andhra Pradesh.

CHAPTER 1

Introduction

The Travel Booking Agency Website project is designed to provide an online platform for travelers to explore destinations, view travel services, and plan their trips easily. This website helps users access travel information, book services, and contact the agency from anywhere. The project focuses on creating a user-friendly, attractive, and responsive website using web technologies such as HTML and CSS.

1.1 Problem Definition

The Travel Agency Website project aims to solve these problems by providing a centralized, user-friendly online platform where customers can explore destinations, view available travel services, and contact the agency easily. This website helps automate information sharing, improves customer engagement, and enhances accessibility, making travel planning faster, simpler, and more efficient.

1.2 Existing System

- Travel agencies rely on manual processes and traditional methods.
- Customers must visit the agency in person or contact via phone.
- Information is provided through brochures or verbal communication.
- Limited availability of updated destination and package details.
- Time-consuming process for inquiries and bookings.
- Manual record-keeping increases chances of errors.
- Limited customer reach (mostly local).
- No 24/7 access to travel information.
- High workload for staff.
- Lower customer convenience and satisfaction.

1.3 Proposed System

- A web-based travel agency website accessible anytime and anywhere.
- Provides detailed and updated information about destinations and services.
- Easy navigation and user-friendly interface.
- Customers can explore travel packages online.
- Online inquiry and contact facility.
- Reduces manual work and paperwork.

- Improves accuracy and efficiency.

1.4 Literature Review

Various studies and existing travel websites show that online travel platforms play a crucial role in simplifying travel planning and improving customer experience. Previous research highlights that web-based travel systems provide easy access to destination information, online booking options, and customer support, which increases user convenience and satisfaction. Many existing travel agency websites use responsive design and centralized data management to reduce manual work and improve efficiency. These studies support the need for a user-friendly travel agency website to meet the growing demand for digital travel services.

CHAPTER 2

SYSTEM REQUIREMENTS

2.1 Hardware & Software Requirements

Hardware Requirements

- Computer or Laptop
- Processor: Intel Core i3 or higher
- RAM: Minimum 4 GB
- Hard Disk: Minimum 250 GB
- Internet Connection

Software Requirements

- Operating System: Windows 10 / Windows 11
- Web Browser: Google Chrome, Mozilla Firefox, or Microsoft Edge
- Front-End Technologies: HTML, CSS
- Code Editor: Visual Studio Code / Notepad++

2.2 Software Requirements Specification (SRS)

The SRS document outlines the functional and non-functional requirements of the system:

- **Functional Requirements (FR):**
- Users can view information about popular travel destinations.
- Users can browse travel packages and services offered.
- Users can submit inquiries or contact the agency through an online form.
- Navigation links allow easy movement between sections (Destinations, Services, About, Contact).
- Admin can update destination details, packages, and contact information (if backend implemented).

Non-Functional Requirements (NFR):

- Usability: The website should have a simple and user-friendly interface.
- Performance: Pages should load quickly and work smoothly on different devices.
- Security: Contact form submissions should be handled securely.
- Availability: The website should be accessible 24/7 via the internet.
- Compatibility: Should work on all major browsers (Chrome, Firefox, Edge).

CHAPTER 3

SYSTEM DESIGNS

3.1 Modules of System

The system can be divided into the following main modules:

- 1 Home / Landing Page Module
 - Displays the website's introduction, hero banner, and navigation menu.
 - Provides quick links to other sections like Destinations, Services, About, and Contact.
- 2 Destinations Module
 - Showcases popular travel destinations with images and brief descriptions.
 - Helps users explore different locations easily.
- 3 Services Module
 - Lists the travel services offered, such as flight booking, hotel reservations, and tour packages.
 - Provides details of each service for better user understanding.
- 4 About Us Module
 - Gives information about the travel agency, its mission, and its services.
 - Builds trust and credibility with the users.
- 5 Contact / Inquiry Module
 - Allows users to submit inquiries or contact the agency through an online form.
 - Collects user details like name, email, and message.
- 6 Footer Module
 - Provides general information such as copyright, social media links, and quick navigation

3.2 UML Diagrams

1. Use Case Diagram:

Shows interactions between the Customer, Admin, and System for processes like browsing destinations, viewing travel packages, submitting inquiries, and responding to customer queries.

2. Class Diagram:

Describes classes such as Customer, Admin, Destination, Package, Contact Form and shows how they relate to each other. For example, the customer can submit inquiries, Admin can update

Packages and Destinations.

3. Activity Diagram:

Illustrates the flow of actions for tasks like a customer browsing destinations, selecting a travel package, filling the inquiry form, and receiving a response from the agency.

4. Sequence Diagram:

Shows how objects interact over time for processes like a customer selecting a destination, viewing package details, submitting an inquiry, and Admin responding to the request.

CHAPTER 6

CONCLUSION

- The Travel Booking Agency Website simplifies travel planning.
- It provides a modern, efficient, and user-friendly platform.
- The project demonstrates effective use of HTML and CSS.
- This project reduces manual effort, saves time for both customers and staff, and improves accessibility by providing information 24/7. By moving from a traditional offline system to a web-based approach, the travel agency can reach a wider audience and improve customer satisfaction.
- Overall, this project highlights the importance of digital solutions in the travel industry and shows how basic web technologies can be effectively applied to solve real-world problems.
